

Designed to effortlessly consolidate
business and organizational processes

ABOUT CONSOLS

- ❖ Consols (Consolidated Solutions) is a web based business solution that houses several business solutions carefully designed to computerize major business processes.
- ❖ It covers business processes including enterprise management, manufacturing, logistics, employee management and so on.
- ❖ Its user interface is friendly as it is easy to navigate from solution to solution and as well as module to module.

CONSOLS FUNCTIONALITIES

SECURITY

- ❖ Consols is highly secured with the latest web security policies.
- ❖ Password complexity: Consols is embedded with strong password policy of minimum of 9 characters which must include special characters and numbers or letters.
- ❖ Password expiration: Consols is designed with a security feature that can be activated to cause expiration of users passwords after a certain period of time. The activation and password resetting can be done by the system's administrator only.
- ❖ Password history: The history of password is saved on the database for audit purpose.
- ❖ Mac address filtering system: This security feature when enabled allows a user to login only on the computer he or she is assigned to.
- ❖ Wrong login attempt threshold: A Security policy that instantly deactivates a user's account once a wrong password had been entered for a couple of times as preset by the administrator.

CONSOLS FUNCTIONALITIES

SECURITY

- ❖ Multiple access restriction: If enabled, a user can not be able to login on more than one system at a time.
- ❖ Domain or Public IP restriction: Even when the system is hosted on a cloud network, access can be limited to a specific public IP address. This is to block unauthorized access of the application.
- ❖ Session time out: For security reasons, the system times out automatically after a certain period of inactivity from user. The time out session is preset by the administrator.
- ❖ Solution access permission: Access to solutions within the Consolidated Solution is limited to the solutions the administrator has granted to a user.
- ❖ Entity access permission: Access to an entity within the Consolidated Solution is limited to the entity the administrator has granted to a user.
- ❖ C.R.U.D (Create, Read, Update and Delete) permission: A user can only have rights to create, read, update or delete data on the system as permitted by the administrator.
- ❖ Standalone administrative panel: The administrative panel stands and looks different from the other users' interface. This makes the administrator to perform his/her function by interacting with the user interface.

CONSOLS FUNCTIONALITIES

FEATURES

- ❖ **Customizable**: The solutions within the Consolidated Solution can be customized further such that it covers a company's business process end-to-end.
- ❖ **Multi-Company**: Consols can be implemented for more than one subsidiaries under the parent company.
- ❖ **Web-Based**: Consols is a web-based application which means it can be accessed from any where with the use of a web browser and internet access.
- ❖ **Support Cloud Hosting**: Consols can be hosted on a cloud network meaning it can be accessed using the internet connection when the user is not close to the server.
- ❖ **Support Local Hosting**: It can be hosted on a local network, this means it can be used without internet connection in situations where the server is within the reach of the user.
- ❖ **Global or Group Reporting**: For a business with subsidiaries, Consols provides a platform where consolidated report and data can be generated.

CONSOLS FUNCTIONALITIES

FEATURES

- ❖ **Multi-User**: Multiple users can work independently and at the same time.
- ❖ **Mobile Friendly**: Consols can be accessed not just with computer but also on mobile devices (Smartphones and Tablets).
- ❖ **Standard Reporting**: Standard reporting made easy. With few clicks, reports are displayed.
- ❖ **Analytics**: Graphical presentation of several metrics to aid businesses with decision making.
- ❖ **Customizable Reporting**: Apart from standard report which is embedded in Consols, reports can also be customized to further suit a business owner.
- ❖ **Integrate-able**: For the purpose of hand-shaking, Consols can be integrated to work hand-in-hand with other solutions to achieve a purpose.

CONSOLS OIL & GAS LOGISTICS

This is a business solution designed to seamlessly computerize activities carried out in an oil and gas logistics business. Consols oil and gas dashboard provides us with various platforms where major operations relating to oil and gas logistics business can be carried out from the beginning till the end. These oil and gas operations or activities are classified into 3 modules in Consols Oil & Gas Logistics, they are:

- Deal
- Operations
- Logistics

Deal

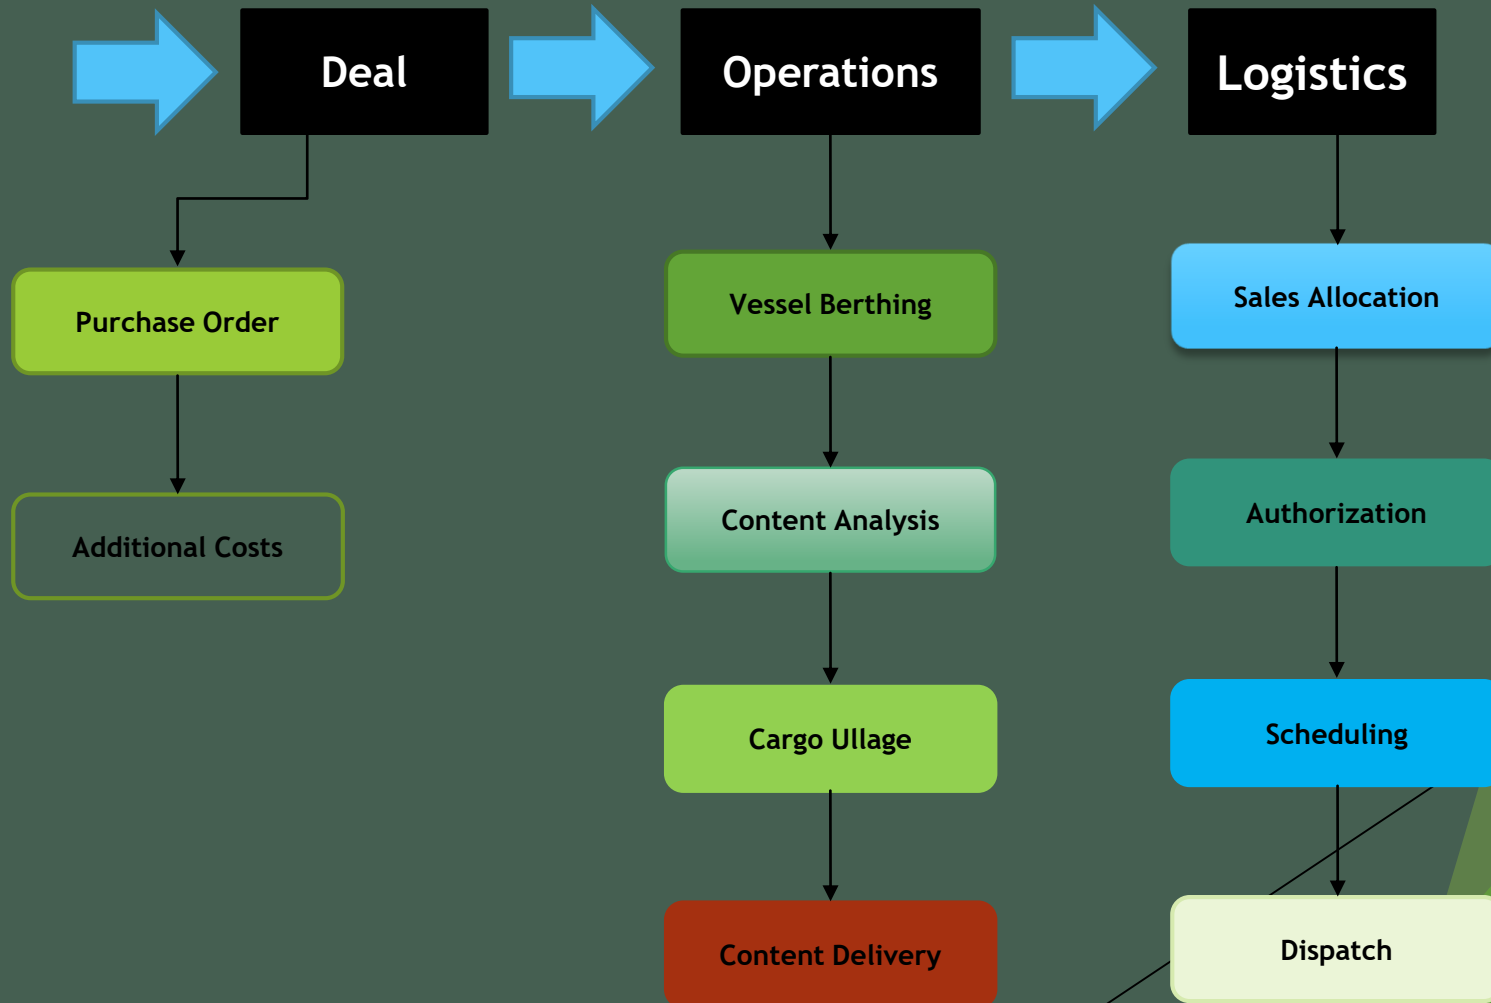

Operations

Logistics

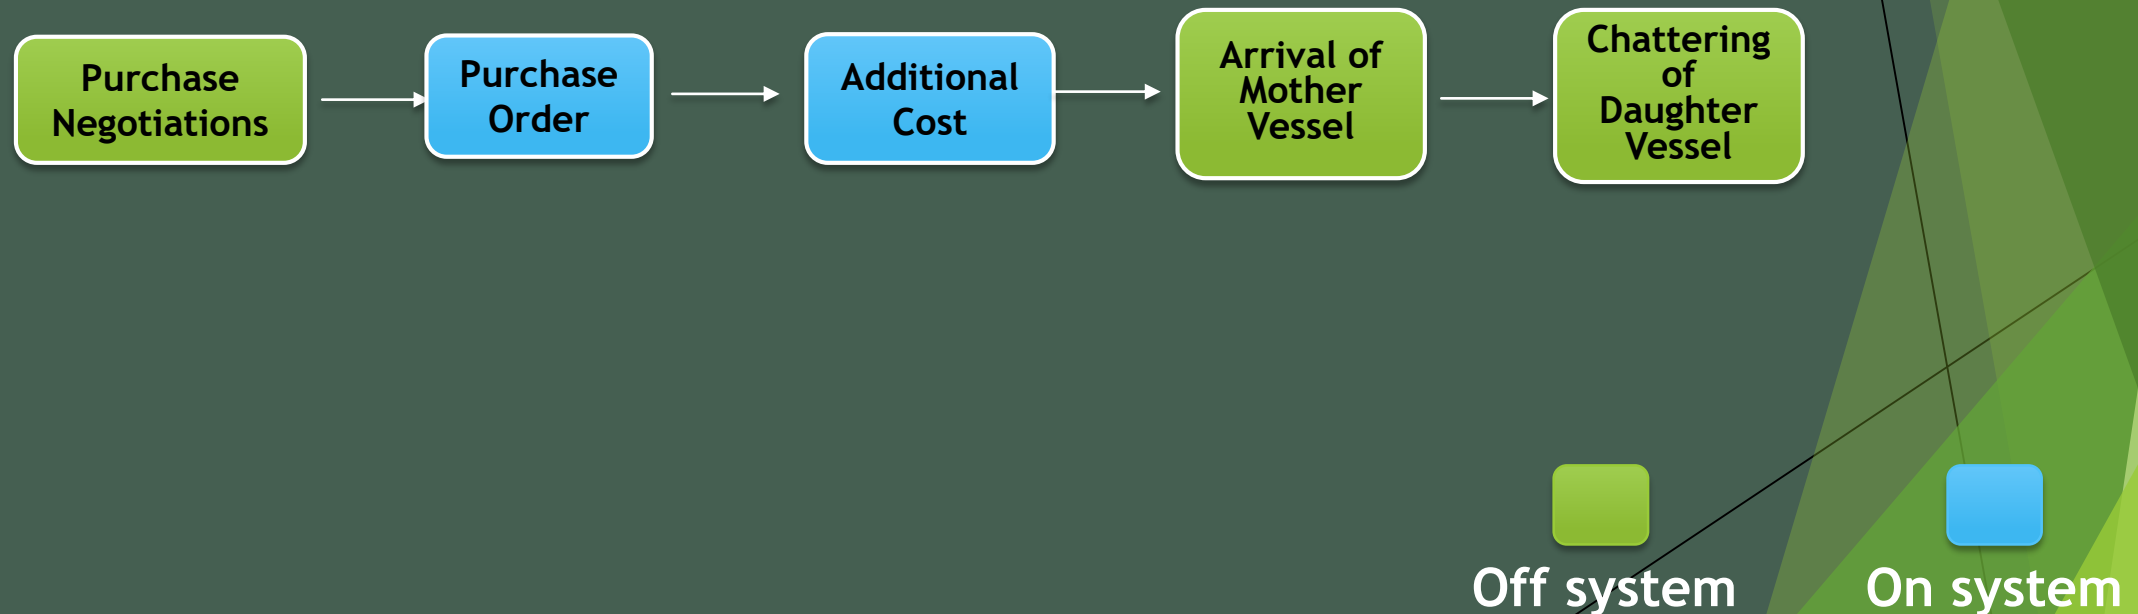

OIL & GAS LOGISTICS PROCESS

DEAL

The deal process covers the major processes involved in the purchase of the oil and gas products prior to the arrival of those products through a mother vessel. It also involves the process of recognizing additional costs like Jetty Fees, Agency Fees, Chattering of Vessel and other costs that form part of the landing cost of the product.

DEAL

Purchase Order

Additional Cost

PURCHASE ORDER

This is a platform where details pertaining to the purchase of products are entered and a purchase order will be generated. The purchase order is then sent to the vendor with other documents so as to serve as a binding document for the purchase.

LOADING TICKET

This is the ticket or note generated and given to the customer representative (depot supervisor) to serve as a passage for loading. It contains details about the loading schedule, truck number, the customer's details, the required quantity, driver's details, loader's details and other officers in charge of overseeing the loading of those products.

LOGISTICS

			
Allocation	Authorisation	Scheduling	Dispatch

DISPATCH

This is the process of recording the loading information truck by truck for the purpose of generating a waybill. The waybill is generated once a loading ticket has been filled with the necessary information. At this point, Consols will record some accounting entries by debiting the customer and crediting the sales ledger and at the same time debit the cost of sales ledger and credit the inventory control account.
